

Attraction and Repulsion in the Universe: Explanation of Mass, Dark Energy, Dark Matter, and Their Places in Creation

By Miroslav Halza

Outskirts Press, United States, 2012. Paperback. Book Condition: New. 216 x 140 mm. Language: English . Brand New Book ***** Print on Demand *****.The book Attraction and Repulsion in the Universe explains the terms Mass, Dark Energy and Dark matter. Miroslav Halza hypothesizes the existence of a trinity of subatomic Builder particles that manage the growth and expansion of the post-Creation universe via three elemental long-range forces. Gravitons mediate the relatively weak gravitational force, which draws objects together; photons mediate its opposite, the phototational force that pushes objects apart; and neutrinos (along with their parent particles, magnetons) mediate the powerful inductive attractive force. Drawing on recent discoveries in the field of astronomy, astrophysics, and particle physics, Halza carefully combines classic mechanics with its quantum counterpart to draw conclusions about underpinnings of our Universe that are both Biblically acceptable and scientifically plausible. Extrapolating from undisputed physical law and counterintuitive subatomic interactions alike, he goes on to explain why the inductive force obviates the need for the hypothetic dark matter that some cosmologists add to their theories of the universe in order to balance their equations--based on the misconception that gravity acts as the only long-range attractive force in our universe. The...

Reviews

I just started out reading this ebook. It is rally exciting throgh reading through time. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Leonie Collins**

Complete information! Its this kind of good study. This really is for all those who statte that there was not a well worth looking at. I found out this pdf from my dad and i encouraged this ebook to learn.
