*Good electronic book and useful one. It usually does not expense a lot of. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Excerpt from Considerations Upon Medical Haemorrhage Surgically Treated: With a Successful Case, by a New Technique, of Saline Infusion for Severe Haemorrhage Dr. Loomis opinion in a matter of bleeding from the lungs is one which would be, I think, accepted with respect. His Text book of Practical Medicine, eighth edition, p. 95, says, It has never seemed to me that styptics or astringents have any control over bronchial haemorrhages, but aconite and opium are the two remedies upon which I rely. When the pulse is full and strong, I use aconite when it is weak, I employ morphia hypodermatically. The really valuable means, concerning which the present paper is in part to treat, Dr. Loomis does not even mention. As to aconite, so far as it is of use at all, it is by bleeding the patient into his own veins, so to speak; and has hence been called the vegetable lancet. This idea in a much more efficient form, is just what I propose to advocate. Regarding morphine, by slowing the breathing it renders the pulmonary circulation rather less active and it also causes mental quietude and calm. But that is all. After a time nature causes a coagulum at the mouth of the bleeding vessel; and to aid this, our drugs do very little. During eight to ten years past, I have, for purely logical reasons, been urging upon my students a different line of treatment in these cases - cases, I mean, of dangerous and yet unreachable bleeding anywhere.
