# Big Data Analytics with MATLAB: Multivariate Regression, Multidimensional Scaling and Dimension Reduction (Paperback)

Filesize: 5.74 MB

Reviews

It in one of the best pdf. It is writter in straightforward words and never difficult to understand. Its been designed in an extremely straightforward way and it is just following i finished reading this book through which basically modified me, affect the way i believe.

BIG DATA ANALYTICS WITH MATLAB: MULTIVARIATE REGRESSION, MULTIDIMENSIONAL SCALING AND DIMENSION REDUCTION (PAPERBACK)

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.MATLAB has the tools to work with large datasets and apply the necessary data analysis techniques. This book develops the work with Multivariate Regression, Multidimensional Scaling and Dimension Reduction Techniques. Big data analytics examines large amounts of data to uncover hidden patterns, correlations and other insights. With today s technology, it s possible to analyze your data and get answers from it almost immediately - an effort that s slower and less efficient with more traditional business intelligence solutions. The multivariate linear regression model expresses a d-dimensional continuous response vector as a linear combination of predictor terms plus a vector of error terms with a multivariate normal distribution. One of the most important goals in visualizing data is to get a sense of how near or far points are from each other. Often, you can do this with a scatter plot. However, for some analyses, the data that you have might not be in the form of points at all, but rather in the form of pairwise similarities or dissimilarities between cases, observations, or subjects. There are no points to plot. Even if your data are in the form of points rather than pairwise distances, a scatter plot of those data might not be useful. For some kinds of data, the relevant way to measure how near two points are might not be their Euclidean distance. While scatter plots of the raw data make it easy to compare Euclidean distances, they are not always useful when comparing other kinds of inter-point distances, city block distance for example, or even more general dissimilarities. Also, with a large number of variables, it is very difficult to visualize distances unless the data can be represented...
