

Passively Mode-locked Diode-pumped Yb:CaF₂ Oscillator

Filesize: 7.97 MB

Reviews

The ebook is fantastic and great. I am quite late in start reading this one, but better then never. Your life period will probably be convert as soon as you comprehensive reading this ebook.

(Dr. Albertha Hoppe)

PASSIVELY MODE-LOCKED DIODE-PUMPED YB:CAF2 OSCILLATOR

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Ultrafast (UF) mode-locked (ML) lasers are extremely powerful tools in scientific research and industrial applications including material processing, nonlinear optics, attosecond science, metrology, etc. The most popular UF Ti:sapphire laser applications are limited by its high ownership cost, system complexity and low power transfer efficiency. Yb³⁺:CaF₂ has been recognized as a promising candidate for a high efficient and high power femtosecond laser, for its simple energy-level scheme, high quantum efficiency (~1), very small quantum defect (70 nm), high thermal conductivity and compatibility with high power InGaAs diode pumping. Two types of Yb³⁺:CaF₂ ML resonators based on semiconductor saturable absorber mirrors (SESAMs) and Kerr lens mode-locking (KLM) have been demonstrated and analyzed in detail. A Kerr-lens ML oscillator was constructed for continuous-wave modelocking operations by incorporating an additional optical element with an enhanced nonlinear Kerr coefficient, which represents the first such investigation for an Yb³⁺:CaF₂ oscillator to our best knowledge. | Format: Paperback | Language/Sprache: english | 192 pp.
