

Computational Modeling and Remodeling of Human Eye Tissues as Biomechanical Structures at Multiple Scales

Filesize: 3.81 MB

Reviews

An incredibly great ebook with lucid and perfect explanations. It is actually rally fascinating throgh studying period of time. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Josefina Yundt)

COMPUTATIONAL MODELING AND REMODELING OF HUMAN EYE TISSUES AS BIOMECHANICAL STRUCTURES AT MULTIPLE SCALES

[DOWNLOAD PDF](#)

Shaker Verlag Jan 2009, 2009. Taschenbuch. Condition: Neu. Neuware - This thesis is concerned with the biomechanical modeling of human eye tissues within a multi-scale framework considering the micro-, meso-, and macro-structure in the context of constitutive formulation, computational modeling and remodeling. Consideration of the heterogeneous tissue substructures opens promising perspectives for more realistic biomechanical modeling and computational simulations of the human eye in physiological and pathophysiological conditions. The biomechanical properties of eye tissues are derived from the single crimped fibril at the micro-scale via the collagen network of distributed fibrils at the meso-scale to the incompressible and anisotropic soft tissue at the macro-scale. Tissue adaptation and the mechanical condition within biological tissues are complex and mutually dependent phenomena. In this work, a computational model is presented to investigate the interaction between collagen fibril architecture and mechanical loading conditions in eye tissues. Biomechanically induced remodeling of the collagen network is considered at the meso-scale by allowing for a continuous re-orientation of collagen fibrils. To gain further insight into the complex multi-scale phenomena related to glaucomatous optic neuropathy biomechanical computations of the lamina cribrosa at the meso- and macro-level are performed. For multi-scale analyses of human eye shells the computational homogenization scheme is generalized to a consistent formulation of meso-macro transitions in curvilinear coordinates. The presented numerical results are in very good agreement with experimental observations at different length scales representing a novel, biomechanical paradigm for understanding the cause of glaucomatous optic neuropathy. 187 pp. English.
