

## Universalities in Condensed Matter

Filesize: 7.23 MB

### ***Reviews***

*This book is great. it was writtern quite flawlessly and helpful. You will not truly feel monotony at whenever you want of your time (that's what catalogs are for concerning if you ask me).*

Book Condition: New. Publisher/Verlag: Springer, Berlin | Proceedings of the Workshop, Les Houches, France, March 15-25,1988 | Universality is one of the fascinating features of condensed matter physics: it is the property whereby systems of radically different composition and structure exhibit similar behavior. In the mid-1960s the word entered usage to express the fact that the equations of state of several substances could be mapped onto one another near the critical point: critical universality. Renormalization group theory in the early 1970s provided both an explanation and a sharper definition of universality. Systems with similar behavior - universality classes - correspond to the same fixed point of a renormalization group transformation. A number of brilliant contributions showed how the same concepts could be applied to non-thermodynamic systems, such as the statistics of self-avoiding walks or of connected clusters on a lattice. A few years later it was realized that chaotic dynamical systems may also exhibit some degree of universality, the paradigmatic example being the period doubling cascade in the iterated maps of the unit interval into itself. | I Geometrical Approaches.- Hierarchy of Line Defects in Structures.- Are There Universalities in Systems with Frustrated Local Order?.- Contribution to the Theory of Quasicrystal Approximants.- Beyond Quasiperiodicity: Scaling Properties of a Fourier Spectrum.- The Fibonacci Chain Quasicrystal: An Exact Decimation Approach.- II Critical Scaling.- Experimental Investigations of the Sol-Gel Transition.- Conformation, Connectivity and Mechanical Properties of Polycondensates Near the Gel Point.- Conformation and Dynamical Properties of Polymer Clusters in Concentrated Solution.- Percolation and Dispersive Conduction in Fluid-Saturated Porous Media.- Microscopic Observation of Critical Fluctuations: Fractal Aspects.- Some Static and Dynamic Results for Walks on the Lattice.- Problem of Universality in Phase Transitions in Low-Symmetry Systems.- Exact Critical Properties of Two-Dimensional Polymer Networks from Conformal Invariance.- A Hierarchical Schrödinger Operator.- Universality and Nonuniversality...
