An Elementary Manual of New Zealand Entomology Being an Introduction to the Study of Our Native Insects

By George Vernon Hudson

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1892 edition. Excerpt: . . . The perfect fly appears in about six weeks time, its great agility and large white scales rendering it very conspicuous. Family MUSCIDE. Eurigaster marginatus (Plate VII. , fig. 7). Another parasitic species, its larva inhabiting the caterpillars of various noctuae which it destroys just before they change into the chrysalis state. The pupa of the parasite lies in a small oval cell constructed in the earth by its larva. A variable number of these maggots are found associated in one host, the smaller caterpillars only harbouring a single individual, while a large larva will frequently contain three or four. This species has been bred from the following Lepidoptera: Mamestra composita, M. ustistriga and M. mutans. It also occurs in the curious CEceticus omnivorus, being found in the cocoons of that moth in numbers varying from two to eleven, or even more, and it is...
