

8.Análisis de varianza con medidas repetidas.

By Jiménez, Carmen/San Martín,Rafael.

LA MURALLA, 2000. Condition: Nuevo. En la presente monografía se exponen los principales modelos de análisis de varianza (o ANOVA) con medidas repetidas. Está especialmente dirigida a profesionales de las ciencias sociales y la educación/o a estudiantes de licenciatura o postgrado cuya actividad investigadora precise el análisis de datos con medidas repetidas. Se estructura en dos partes. En la primera se expone el modelo que incluye un único factor, y en la segunda los modelos de dos factores (medidas repetidas en ambos y sólo en un factor). Para cada modelo se hace referencia al modelo lineal general que plantea, el tipo de datos que permite analizar, los supuestos estadísticos en que se basa y los estadísticos que utiliza. La explicación de cada modelo se acompaña con ejemplos resueltos tanto numéricamente como mediante soporte informático a través del programa SPSS para Windows. Los autores han cuidado al máximo la claridad en la exposición y en la organización de contenidos para que el lector que no disponga de una base matemática sólida pueda seguir el texto sin dificultad.
