

School algebra Volume 1

Filesize: 2.04 MB

Reviews

This book might be really worth a read, and superior to other. This really is for all who statte there had not been a really worth studying. I am just happy to tell you that this is basically the very best pdf i actually have read through during my very own lifestyle and may be he best ebook for actually.

SCHOOL ALGEBRA VOLUME 1

To read **School algebra Volume 1** eBook, remember to follow the web link beneath and save the file or have access to additional information which are relevant to SCHOOL ALGEBRA VOLUME 1 book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 48 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: . . . 134. Two Simple Equations. If we have two simple equations containing two unknown quantities, we can usually derive from them a single equation containing only one unknown quantity. For example, suppose $x + y = 17$, and $x - y = 9$. Adding member for member, $2x = 26$; whence $x = 13$. And because $x + y = 17$, we have $13 + y = 17$; whence $y = 4$. 135. Simultaneous Equations. Two or more equations that have the same values for the unknown quantities are called simultaneous equations. 136. Elimination. The process by which we cause an unknown quantity to disappear in deriving an equation from a system of equations is called elimination. Thus in 134 we derived the equation $2x = 26$ from the system of equations $x + y = 17$ and $x - y = 9$, thereby eliminating y . The most common methods of elimination are (1) by addition (or subtraction as a special case), and (2) by substitution. These will now be considered. 137. Elimination by Addition or Subtraction. This process is best understood by studying two examples. 1. Solve the system of equations $2x + 3y = 27$ (1) $5x - 2y = 1$ (2) Multiplying (1) by 2, $4x + 6y = 54$ Multiplying (2) by 3, $15x - 6y = 3$ Adding, $19x = 57$ Dividing by 19, $x = 3$. Substituting 3 for x in (1), $6 + 3y = 27$ Subtracting 6, $3y = 21$. Dividing by 3, $y = 7$. Check. Substituting 3 for x , and 7 for y , in (1) and (2), we have $6 + 21 = 27$, $15 - 14 = 1$..
