RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 68 pages. Original publisher: Washington, D. C. : U. S. Environmental Protection Agency, Office of Research and Development, 2001 OCLC Number: (OCoLC)49573057 Subject: Groundwater -- Pollution -- Measurement. Excerpt: . . . Figure 1. Conceptual representation of the distributed NAPL source problem. vicinity of a NAPL source are called state variables. The temporal and spatial evolution of these variables is described by a set of partial differential equations called state equations. These equations are typically based on conservation laws and associated constitutive relationships that describe the physical system of our problem. Further details for the specific problem considered in this report are provided in Chapters 3 and 5. The spatially distributed state equations for this problem have the following general form: y A y, , u G y, , u, g b g b t y x, t l b b g g (2) B y, 0 b g In this equation y (x, t) is a vector of states, (x) is a vector of time-invariant parameters, u (x, t) is a vector of known forcing functions, and (x,...
