

Cosmos and Life

By Wolfgang Hebel

Deutscher Wissenschafts V Aug 2014, 2014. Taschenbuch. Book Condition: Neu. 208x149x8 mm.

Neuware - These are four summary articles on selected topics already discussed by the author in his previous books edited by Deutscher Wissenschafts-Verlag (DWV) Baden-Baden [1], [2], [3]. The final article of this booklet reports on the 'Conference of Nobel Laureates meeting students in 2010'. This multi-national event of outstanding academics is most appreciated worldwide and traditionally takes place at the City of Lindau in Lake of Constance once a year. Particularly, however, the author discusses in the first article his alternative approach on 'The New Physics of Cosmic Red Shift', which possibly changes our views as to the origin and frontiers of the Cosmos. In the two other articles, about 'Life versus Entropy' and on 'Functional Physics of Life', the author summarizes his conclusions from innumerable high level scientific meetings and research workshops partly supported by the EU Commission over the period 1985-2010, in favor of the advancement of knowledge especially in the fields of molecular biology, living molecular systems and the origin of life on earth [4]. Reviews

This book is definitely not effortless to start on reading through but extremely fun to learn. Better then never, though i am quite late in start reading this one. It is extremely difficult to leave it before concluding, once you begin to read the book.
