Li Huawei. Hu Jianmin. Baibing book recently Reclaimed land base deal with one of the most significant feature of the new technology and engineering practice. is always combined with the regional characteristics of land reclamation. carefully planned targeted specialty construction technology experimental zone. set in the ground and soil within a large number of detection or long-term monitoring devices (soil stress. deformation. displacement. pore pressure. pick-up device probe). and to develop adaptation study engineering characteristics and site soil environmental conditions of the test program. The novel. is reasonably arranged. state-of-the-art processes. in order to the reasonable inputs get the most blow filling and soft foundation soil in the process can reveal the essential characteristics change and deal with the effect of the first-hand information. fruitful and informative data. does not come easily . EXECUTIVE SUMMARY This book explores the the recently blown filling engineering geological characteristics of the physical and mechanical properties. proposed new foundation suitable for the type of foundation soil reinforcement technologies and construction methods. To this end. the book is based on a number of typical engineering background. as the main means of field trials testing combined with laboratory experiments and theoretical analysis. carried out the foundation reinforcement conditions under deformation. pore pressure. squeezing stress changes law. and construction parameters to optimize the analysis.
