

Computing Reality (Paperback)

Filesize: 7.55 MB

Reviews

This ebook is fantastic. It is actually written in straightforward terms rather than hard to understand. It has been designed in an extremely straightforward way and it is merely soon after I finished reading through this ebook through which in fact modified me, altered the way I really believe.

COMPUTING REALITY (PAPERBACK)

Blue Ocean Press, 2008. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.>Computing Reality is a rare and challenging research output in the area of cybernetic and system theory explaining the meaning behind the understanding, interpretation and application of scientific methodology for knowing scientific truth. The fundamental goal of Computing Reality is to explain how knowledge in scientific investigation can be derived, organized and deciphered in the light of unity of knowledge as the episteme. The book uses these foundational socio-scientific ideas in areas of philosophy of science, economics, society and science and computer modeling to explain specific socio-scientific problems in the light of the foundational conceptions and their application. Computing Reality invites the reader into understanding a fresh new look at the nature of relations between reasoning, science, and society. Special reference is given to certain fundamental issues of economics and world-system in the context of liberalism, globalization and Islam. The technical along with a generalist treatment in the book presents a comprehensive originality of a phenomenological model whose origin lies in a systemic and cybernetic view of unity of knowledge. Some of the new ideas presented here can be of a substantively provocative nature to the serious student, academic and researcher in philosophy of science. The book is nonetheless written for the generalist informed reader as well, enabling the interface with today s increasing consciousness on the relationship between religion, morality, ethics, science and society. The book may be considered as a pioneering contributing to post-modernist criticism of foundational questions of science and society. Computing Reality is a contribution in the area of system and cybernetic theory examined from the perspective of science and society interrelationship. It goes beyond the modern contributions in this area by proving with conceptual and applied depth the...
