

Concepts, Mechanisms, and New Targets for Chemotherapy

Filesize: 3.13 MB

Reviews

A high quality book as well as the font applied was fascinating to see. It generally fails to charge excessive. I am just effortlessly could possibly get a enjoyment of studying a composed book.

CONCEPTS, MECHANISMS, AND NEW TARGETS FOR CHEMOTHERAPY

To read **Concepts, Mechanisms, and New Targets for Chemotherapy** eBook, remember to access the button under and save the ebook or get access to additional information that are related to CONCEPTS, MECHANISMS, AND NEW TARGETS FOR CHEMOTHERAPY book.

Book Condition: New. Publisher/Verlag: Springer, Berlin | Concepts, Mechanisms, and New Targets for Chemotherapy describes new interconnections between rationally designed and empirically discovered compounds. One route that has not been travelled previously is that of protein kinase C inhibition. This pathway may be exploited to give potent inhibitors, such as the bryostatins, now in clinical trial. A summary is given of the current status of topoisomerase, focusing on recent clinical advances with camptothecin analogs based on connecting empiricism with concepts of drug selectivity. Modification of existing therapies based on the pursuit of leads arising from mechanistic studies is also being applied clinically on a wide scale. Greater understanding should follow from the studies of reversal of the multidrug resistant phenotype, on the use of hydroxyurea to reverse resistance mediated by extrachromosomal DNA, and on various aspects of the fluoropyrimidine pathways. Successful applications of chemotherapy to the treatment of specific diseases include the growing applications of systemic therapy using various skin malignancies. In prostate cancer, estramustine phosphate will likely play an expanding role. Taxanes are restructuring treatment regimens in breast cancer, and high-dose strategies are described with peripheral blood progenitor autografting in the treatment of ovarian and breast cancers. | Preface. I: Concepts and Mechanisms. 1. Potential for Protein Kinase C Inhibitors in Cancer Therapy; P.A. Philip, A.L. Harris. 2. Recent Clinical Advances with Camptothecin Analogues; W.J. Slichenmyer, R.C. Donehower. 3. The Reversal of Multidrug Resistance; G.A. Fisher, et al. 4. Fluoropyrimidine Catabolism; R.B. Diasio, et al. 5. Use of Hydroxyurea to Alter Drug Resistance of Human Tumor Cells; C. van den Berg, D.V. von Hoff. 6. Aspects of One-Carbon Folate Cycling Related to Fluoropyrimidine and Antifolate Therapy; C.V. Spears, et al. II: Disease Targets. 7. Systemic Therapy of Skin Carcinoma; R.F. Kempf. 8. Estramustine Revisited; W. Kreis. 9. Taxoid Compounds...
