This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1860. Excerpt: . . . In conclusion, it may be remarked, that in the cases represented in figs. 1, 2, and 3, it is not necessary to illuminate so large an area as in that represented in fig. 4, because the area seen by the observer is smaller in the former ones. Part III. -- MODES OF VIEWING OBJECTS WITHIN THE EYE. Having now considered the mode of illuminating the fundus oculi, we come to treat of the various conditions under which we may obtain a distinct view of objects situated upon it, by means of light reflected from their surfaces. If we hold a biconvex lens between the eye and the page of a book, and at a distance from the book less than its own principal focal distance, we see an erect magnified virtual image of the print. If we remove the lens further from the book, the...

Reviews

This published book is wonderful. It is really simplified but unexpected situations within the fifty percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Dr. Janis Reilly**

Extensive guide! Its this kind of great read. It is really simplistic but excitement from the 50 percent of your pdf. I am just quickly will get a pleasure of looking at a composed book.
