RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 60 pages. Original publisher: St. Paul, MN: U. S. Dept. of Agriculture, Forest Service, North Central Research Station, 2003. OCLC Number: (OCoLC)53354660 Subject: Vertebrates -- Habitat suitability index models -- Missouri. Excerpt: . . . Hard Mast Production tree species group and age of dominant trees on a cell. Assuming no mast production on cells Much of the Missouri Ozarks is dominated by dominated by maples or pines, we developed mast-producing hardwoods, especially oaks. separate relationships for red and white oaks Hard mast provides an important fall and winter only. We rescaled the raw index values to a 0 - 1 food resource for many wildlife species. Sullivan SI interval so that SI 1 approximately coin-(2001) developed a mast production model to cided with the maximum mean production of complement other subroutines in LANDIS. The mast on most land types for both red and white main input variables were age of dominant trees oaks (fig. 4). This resulted in SI values greater and land type, and the main output was an than one for 20 percent of tree age x land type x index...
