Cambridge University Press. Paperback. Condition: New. 136 pages. Dimensions: 9.5in. x 6.7in. x 0.4in. This book presents the theoretical foundation of a higher-order logic programming language with equality, based on the clausal theory of types. A long-sought goal of logic programming, the clausal theory of types is a logic programming language that allows functional computation as a primitive operation while having rigorous, sound, and complete declarative and operational semantics. The language is very powerful, supporting higher-order equational deduction and functional computation. Its higher order syntax makes it concise and expressive, abstract data types can be expressed in it, and searching for multiple solutions is a basic operation. The author proves a number of important and surprising results: a Skolem-Herbrand-Gdel theorem for higher-order logic; a Higher-Order Resolution Theorem, which includes as special cases some previously unproven conjectures about equational matching and higher-order matching. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
