# Characterization of Binary Offset Carrier Systems Coexisting with Other Wideband Signals

Filesize: 5.83 MB

Reviews

Basically no phrases to clarify. It really is writter in straightforward phrases rather than hard to understand. You will not sense monotony at at any moment of your own time (that's what catalogues are for concerning if you ask me).

BiblioScholar. Paperback. Condition: New. 78 pages. Dimensions: 9.7in. x 7.4in. x 0.2in.Results for the modeling, simulation, and analysis of interference effects that modern wideband signals have on Binary Offset Carrier (BOC) system performance are presented. In particular, BOC performance is characterized using a basic system model and parameters consistent with those of the Global Positioning System (GPS) Military System (M-Code signal). Three modern wideband signals are addressed in this work as potential interferers. These include the direct sequence spread spectrum (DSSS) GPS clearacquisition code (CA-Code) signal, the DSSS GPS precision code (P-Code) signal, and an Orthogonal Frequency Division Multiplexed (OFDM) signal, which are all modeled to spectrally coexist within the same bandwidth as the M-Code signal. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
