MANIPULATION OF LIGHT USING SLANTED-LAYER PHOTONIC CRYSTALS

Condition: New. Publisher/Verlag: VDM Verlag Dr. Müller | Basics, Concepts and Experimental Methods | Manipulation of light in structures has great potential for real applications similar to the control of the flow of electrons in semiconductors. An example is photonic crystals that exhibit photonic bandgaps in which electromagnetic wave propagation in the bandgaps is forbidden. This can be used to bend light, similar to the use of waveguides. A simpler approach is to use slanted-layer structures in thin films...
