

Semantic Web-based Intelligent Geospatial Web Services

Filesize: 3.4 MB

Reviews

An exceptional ebook along with the typeface applied was intriguing to read. It is definitely simplistic but unexpected situations within the fifty percent of the publication. You are going to like just how the writer publish this pdf.

(Adeline O'Kon)

SEMANTIC WEB-BASED INTELLIGENT GEOSPATIAL WEB SERVICES

Condition: New. Publisher/Verlag: Springer, Berlin | By introducing Semantic Web technologies into geospatial Web services, this book addresses the semantic description of geospatial data and standards-based Web services, discovery of geospatial data and services, and generation of composite services. Semantic descriptions for geospatial data, services, and geoprocessing service chains are structured, organized, and registered in geospatial catalogue services. The ontology-based approach helps to improve the recall and precision of data and services discovery. Semantics-enabled metadata tracking and satisfaction allows analysts to focus on the generation of a geospatial process model rather than spending large amounts of time in data preparation. "DataType"-driven service composition and path planning can help to automate a range of knowledge discovery processes in a limited geospatial domain. Process planning facilitates the construction of complex services and models for geocomputation. A three-phase procedure to cover the lifecycle of service chaining and to identify the roles of the methods involved is proposed. It includes process modeling, process model instantiation, and workflow execution. The approach is implemented in a prototype system with use cases to demonstrate applicability. The objective of the research is to develop the key technologies for an intelligent geospatial knowledge system based on Web services to automate the data discovery and data preprocessing steps in the distributed Web service environment, to automate a range of knowledge discovery processes in a limited geospatial domain, using the automated construction and execution of service chains, and to facilitate the construction of complex services and models for geocomputation. | Introduction.- Geospatial Web Service.- Geospatial Semantic Web.- Automatic Service Composition.- Semantics for Geospatial Data and Services.- Semantics-enabled Geospatial Data and Services Discovery.- Automatic Composition of Geospatial Web Service.- Prototype Implementation and Result Analysis.- Conclusions. | Format: Paperback | Language/Sprache: english | 237x148x9 mm | 111 pp.
