

A Study of the Effect of Certain Electrolytes on Stabilizing and Precipitating Gold Sols: Submitted in Partial Fulfilment of the Requirements for the Degree of Doctor of Philosophy in the Faculty of Pure

Filesize: 2.6 MB

Reviews

I just began reading this pdf. It is actually written in straightforward words instead of hard to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from A Study of the Effect of Certain Electrolytes on Stabilizing and Precipitating Gold Sols: Submitted in Partial Fulfilment of the Requirements for the Degree of Doctor of Philosophy in the Faculty of Pure Science in Columbia University The centrifuge used for freeing the sols of coarse particles only was a type 3 centrifuge of the International Equipment Co., with rotating arms 2 feet in diameter and with a speed of 2000 r. P. M. This machine developed a force approximately 1200 times gravity. The centrifuge used to precipitate the sols was a Sharples laboratory super - centrifuge with a gold-plated inner bowl of 50 c. C. Capacity. It was non-continuous in operation and capable of developing a force times that of gravity. Conductivity measuring set. The source of current was a small Vreeland oscillator, built to give frequencies of either 500 or 1000 cycles per second. All measurements were made with the higher frequency. The bridge was a Kohlrausch circular slide wire with extension coils. The resistance boxes were in two parts, the smaller one for use up to 1000 ohms had three dials and bifilar wound coils, while the larger one for use up to ohms had two dials with Curtis coils. Two variable rotary air condensers of and micro-farad capacity were used in parallel with the resistance boxes to balance the capacity of the cell. For conductivity water and dilute solutions a cell of the type described by Beans and Eastlack, with a cell constant of was used. While for more concentrated solutions two cells of the Freas type with cell constants of and were used. About the Publisher Forgotten Books...
