American physicist Dr. Frederick Alzofon (1919-2012) was many things -- inventor, visionary, mathematical genius among them -- but he was NOT responsible for the title of this book. That was the work of his son (and editor), David Alzofon, who had an urgent mission in mind: bringing his late father's greatest discovery -- gravity control -- out of obscurity and into the mainstream in hopes of stopping climate change and opening the space frontier. The title hearkens back to 50s sci-fi because this was the era when flying saucers burst upon the scene in a series of sensational sightings, foremost among them the 1947 Roswell incident. The government may have swept up the wreckage at Roswell, but flying saucers have never gone away. Are they real? Well, if we can build one of our own, using data gathered in the field, wouldn't that provide a mighty big piece of the puzzle? In 1981, Dr. Alzofon decoded UFO propulsion, and this book lays out the technology in full, not with pseudoscience, but with high-level physics learned at Cal Berkeley under professors such as J. R. Oppenheimer. The 410-page book is two-in-one: Book I includes an eyewitness history of gravity control by the editor, beginning in Silicon Valley in the 1950s and ending in the editor's last-ditch effort to bring it online in 2017. Book I also describes the astounding implications for the future, including the end of the era of the wheel and the reversal of global warming. It also explains how the discovery hid in plain sight for 35 years. Book II -- theory, technology, and proof -- is made up of unpublished writings and transcribed conversations with Dr. Alzofon....
