A part of the preparation was dissolved in 150 cc. of alcohol of 0.90 sp. gr. and the solution poured into 1000 cc. of absolute alcohol. This produced a turbid liquid, which, on adding a drop or two of sodium-chloride solution, gave a heavy precipitate that rapidly settled, leaving the alcohol colored yellow. This precipitate was again dissolved in diluted alcohol, and precipitated by pouring into ether in order to remove anything soluble in this liquid. No coloring matter was thus removed. The precipitate was then digested with absolute alcohol, yielding preparation 81. The strong alcoholic solution from which this preparation had separated on longer standing deposited a small amount of substance which, when dehydrated, yielded preparation 82. Analysis showed these two substances to have the composition shown in the following table: Preparations 80, 81, and 82. These figures show that the protein extracted from the shorts has the same composition as that similarly obtained from the flour. Protein Extracted By Alcohol From Whole-wheat Flour. As Ritthausen and probably others used whole-wheat flour in extracting the various proteins described by them as soluble in dilute alcohol, it was thought best to carry out some extractions with meal obtained by grinding the entire wheat kernel in the laboratory.
