## The Long Journey of My Little y Chromosomes: The Origins of One Viking Family (Paperback)

By Senior Lecturer Richard Glover

AuthorHouse UK, 2018. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.In Central West Africa over a quarter of a million year ago, mankind evolved to become the very first known genetically and anatomically modern humans - Homo Sapiens. 140,000 years ago some of these modern humans migrated to the Great Rift Valley and Ethiopia, where almost all non-African people living today originated. More than 70,000 years ago, some of their descendants moved across the Red Sea to the Arabian Peninsula, where 90% of the World's existing non-African population originated. Many thousands of years later, some of these hunter-gatherers moved north. Because of climate change their black skin changed to the olive brown of the Middle East, some of them later, migrated to the Caucasus and the Southern Eurasian Steppe grasslands. A few went east to Siberia and Northern Asia and eventually to the Americas, mutations changing their bodily features as they went. Others moved east and south, to India and Australasia. 40,000 years ago, after moving further north to the vast colder Northern Eurasian Steppes, mutations again took place, with the people adapting to the climate, by changing their hair, skin and eye...
