FISCHER Sauerländer Jun 2011, 2011. Buch. Book Condition: Neu. 190x169x12 mm. Neuware - High Quality Content by WIKIPEDIA articles! Motor oil, or engine oil, is an oil used for lubrication of various internal combustion engines. While the main function is to lubricate moving parts, motor oil also cleans, inhibits corrosion, improves sealing and cools the engine by carrying heat away from moving parts. Dieter Klamann's text provides extensive technical detail about motor oils. Motor oils are derived from petroleum-based and non-petroleum synthesized chemical compounds used to make. Motor oils are today mainly blended by using base oils composed of hydrocarbons, polyinternal ofefins, and are thus organic compounds consisting entirely of carbon and hydrogen. The base oils of some high-performance motor oils contain up to 20 wt.-% of esters. 40 pp. Deutsch.
