Reviews

If you need to adding benefit, a must buy book. Better then never, though i am quite late in start reading this one. I discovered this publication from my i and dad advised this pdf to find out.

(Mrs. Glenda Rodriguez)

THICK-LENS OPTICS; AN ELEMENTARY TREATISE FOR THE STUDENT AND THE AMATEUR

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: . distance between image and object, a = distance between the two positions of the lens when giving a distinct image, the object and screen remaining fixed. Proof.--The distances of object and image from the lens are $5(i + a)$ and $(l - a)$, whence $(17), 12241 / 1 - a + a l^2 - a^2$ 132. From Equality of Object and Image.--Distance between object and image = $4f$. (See 37, Ex. 2.) 133. Comparison of Images.--A candle (or illuminated aperture) is placed a distance a from a screen and the image focussed on the screen. On moving the lens towards the candle another image is formed which is m times as large as the former. $a V_m$ The focal length = FOCAL LENGTH OF THICK POSITIVE LENS 134. From Highly Magnified Image. $f = vL + l$ l = length of a division of the scale, L = length of the image. $v u f l u$ Since v is very large, small errors in its measure $L + l$ ment or mistakes in locating the nodal point (to which it should be measured) do not materially affect the result. Len.v.J t White screen. wUhjrreatly magnified image Swing the Screen and scale may be interchanged, with diminished image, using a lens to read the image, in which case, $L f = uL + l$ 135. Swing of Camera or Lens Carrier camera or lens carrier horizontally on a table (guide by a flat stick with a small nail...
