Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .Plant.--The power plant is the heart of the mining plant. The total plant output is dependent upon continuous power service. Not a pound of coal can be shipped without it. Because of the advantages of alternating current transmission, the service is as a rule three phase, sixty cycle, twenty three hundred volt. The voltage is dependent on the distance of transmission. In some localities central power companies stand ready to furnish this service. The number of large central power companies is gradually increasing, until now most of the important fields are thus served. Purchased power as a rule is much cheaper than that generated by the isolated plant. However, all fields are not served by a central power company, and, where this is the case the isolated plant is necessary. The generated power is as a rule three phase, sixty cycle, twenty three hundred volts. The size of the unit or units depends entirely on number of motors and converters to be served. The diversity factor is very great and the load factor ranges from 25 per cent for small plants to 50 per cent for large ones. As a rule two units, totaling the capacity determined, with a third for a spare are installed. They will insure continuous service. The total capacity required can best be determined by the practical experience of other plants operating under similar conditions. All motors outside the mine are alternating current motors of the induction type either 2200 volt or...
