Cuvillier Verlag Okt 2009, 2009. Taschenbuch. Condition: Neu. Neuware - Bacillus thuringiensis (Bt) cotton was introduced in India in 2002 and is the only genetically modified (GM) crop commercially available in the country. The technology faced enormous arguments before and after the official introduction in the country. The author presents the sustainability of effects over time based on unique panel data set of 5 years generated from 3 waves of survey. The study extends beyond the traditional farm level analysis by highlighting the advantages of panel data econometrics in studying technology adoption and impacts. Results suggest that Bt cotton technology is very successful in India. The technology has resulted in higher net impacts on cotton yields and profits. Both small and large-scale farmers in India are very satisfied with the innovation. Government interventions into pricing of transgenic seeds and policy implications are discussed. 162 pp. Englisch.
