Four Programming Languages Creating a Complete Website Scraper Application: Using C#, VB.NET, VBA and Java (Paperback)

By Stephen Link

Createspace, United States, 2015. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. After finishing these pages you will have a complete application which will work for either console or desktop platform. You will be utilizing three languages - C#, and Java for creating this application. Each chapter covers a single language and either the desktop or console application coded in that language. For console program automation purposes, we will be using an Excel sheet and VBA coding. Using the desktop application allows for more flexibility in web page processing, with entry fields for beginning and ending text along with DIVs and other processing options. Enjoy this learning experience. Why would you want such a program? Well, if you had a need to capture the main text from a few web pages, this program would be too much trouble. If you are migrating a web site designed in into another format, maybe a CMS, this approach can be quite useful. If you have 1,000 pages in the site and all are similarly structured, it may take a week for a single person to manually copy and paste the body text from these pages. Using the...

Reviews

This book can be worthy of a read, and much better than other. It usually fails to charge a lot of. I realized this publication from my dad and i encouraged this pdf to understand.
-- Prof. Flo Cruickshank DDS

Complete guide for publication fanatics. It is full of knowledge and wisdom You will not really feel monotony at at any time of your respective time (that's what catalogues are for about should you question me).
