## STUDY ON THE INTERACTION OF HOMOISOFLAVONOIDS WITH NUCLEIC ACIDS

LAP Lambert Academic Publishing Jan 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x7 mm. Neuware - Homoiso flavonoids (3-benzylidenechroman-4-ones) are related to flavonoids and occur as natural products and exhibit various biological activities. Because of these properties, organic chemists are very interesting to homoiso flavonoids. The present study was designed to examine the interactions of four synthetic homoiso flavonoids (BMC, BPC, HBC and HBMC) that exhibit antioxidant, antifungal and antiviral activities, with calf-thymus DNA and RNA in aqueous solution at physiological conditions, using constant DNA and RNA concentration and various homoiso flavonoids/polynucleotide (phosphate) ratios. Fourier transform infrared and UV Visible spectroscopic methods were used to determine the homoiso flavonoids binding site, the binding constants and the stability of homoiso flavonoids DNA and RNA complexes in aqueous solution. The affinity of homoiso flavonoids DNA and RNA bindings are in the order of BPCBMCHBMCHBC. Our spectroscopic results provide a major structural analysis of homoiso flavonoids biopolymers interaction, which helps elucidate the nature of this biologically important complexation in vitro. 120 pp. Englisch.
