Excerpt from The Steam-Turbine Expansion Line on the Mollier Diagram, and a Short Method of Finding the Reheat Factor Let TO be the kinetic energy per unit mass at ao , of the axial component 1 of the velocity, and T the corresponding quantity at A . The channel at AO and A shall be varying in cross section so slowly that the kinetic energy of the radial velocity is negligible. If 1 per cent of the total kinetic energy is a negligible quantity, a total taper of one in four, for a cone, is permissible, so that no severe demands are made on the constancy of cross section at AO and A . Subject to the foregoing restriction in the immediate vicinity of AO and A , the shape of the channel between AO and A is a matter of complete indifference. There may, if we please, be included, as forming a part of the channel or completely inclosed within it, a motor actuated by the flow of the fluid and delivering work outside the channel, or a pump actuated by the application of power from...
