Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from The Diagnosis of Acidosis: A Review and Criticism of the Methods at Present in Use One other factor must clearly come into play to permit of the smooth operation of the above mechanism. Namely. The rate of pulmonary ventilation must be adapted to the amount of  $\text{CO}_2$  that has to be eliminated. This adaptation depends on the respiratory center. The activity of which is preeminently dependent upon the acid base equilibrium in the blood. It is commonly taught that the thing that really stimulates the respiratory center is not the  $\text{CO}_2$  itself. But the slight increase in  $\text{PCO}_2$  which. As explained above. Inevitably occurs. In spite of the butler action. This is. However. Probably an incorrect view. For R. W. Scott. Working in my laboratory. Has found that  $\text{CO}_2$  itself can excite the center quite independently of the H-ion concentration of the blood. Thus Scott found after injecting sodium carbonate into-decerebrate cats until the  $\text{PCO}_2$  was very decidedly lowered. That a subsequent increase in the free  $\text{CO}_2$ . Of the blood excited respiration almost to the same degree as would have been the case when the  $\text{PCO}_2$  of the blood was the normal. And furthermore. That when this excitement occurred. The blood was still markedly alkaline. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
