Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: . uobutenyl ketone (mesityl oxide), and 15 c.c. of an aqueous solution of potassium hydroxide of 333 per cent, strength were introduced into a conical flask fitted with a condensing tube, and the whole was heated for 4 hours on a thin metal plate over a water-bath/ the flask being shaken from time to time. The product, which was very dark-coloured, was poured into warm water, when a black, oily substance separated: this was washed with water and then left until it became semi-solid, after which it was spread on a porous tile. The substance, freed from adhering oil, was recrystallised several times from hot benzene and was thus obtained in slender, yellow needles melting at 205.5. The yield was 7 grams. This arrangement gives a temperature of from 60 to 70, provided that no steam is allowed to condense between the plate and the flask. 0-1632 gave 0-4929 CO₂ and 0-0911 H₂O. C = 82-37; H = 6-20. CH₁₈O₂ requires C = 82.76; H = 6.20 per cent. The same substance was obtained by condensing benzil with methyl wobntenyl ketone in the cold by means of a 0-5 per cent, solution of potassium hydroxide in absolute alcohol; but the yield was even poorer than in the preceding case. A portion of the substance was heated for 10 minutes at 310 (diphenylamine vapour) in an atmosphere of carbon dioxide. It resolidified on cooling and, after recrystallisation from benzene, was found to...
