Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Notes and Questions in Physics There is perhaps little that need be said prefatory to a work of this character. The class-room experience of the authors leads them to believe that any text in Physics needs to be supplemented by problem work in considerable variety. A numerical example in Physics serves a manifold purpose. It takes the mathematical expression of a physical law out of the realm of mere abstraction, by emphasizing the connection between such a law and the phenomena of daily observation. At the same time, it gives the student an idea of the relative magnitude of physical quantities and of the units in which they are measured. Lastly, it shows him the usefulness of his previously acquired mathematical knowledge, while impressing upon him the limitations which must be put upon this knowledge when applied to physical relations. There would seem, therefore, to be no lack of justification for the not inconsiderable labor of writing an extensive series of problems. In the preparation of the following pages, the authors have introduced a number of features which have seemed good to them, and, it is hoped, may meet with general favor. The problems are numbered consecutively throughout the book in Arabic numerals. The paragraphs of the Introduction are numbered in Roman numerals. This contributes to easy reference. All tables of physical constants are placed in the Introduction. To work the problems it will be necessary, not only to read the Introduction, but to refer to it continually. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work....
