Reviews

Undoubtedly, this is the very best job by any article writer. It can be rally interesting through studying time. Your way of life period is going to be transform as soon as you comprehensive reading this article pdf.
(Louie Will)

REPORT VOLUME 5, PT. 1900

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 66 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: . . . of Denver, Colorado: November 17, 1900. Obtained 3 c. c. of pus from swelling in the region of the left inguinal glands. Taken by Dr. Freeman. Direct examination of the stained pus showed numerous chaincocci which morphologically resembled streptococcus pyogenes. Also numerous short forms found resembling diplococci. November 17. Pus plated out in agar-agar, and cultures made on Loflers blood serum and in nutrient bouillon. November 18. Growth on all above media slightly visible to naked eye. November 19. Delicate growth on the above media sufficiently clear to recognize the biological characteristics of the streptococcus pyogenes, when taken into consideration with the staining qualities which the colonies exhibited when subjected to the various aniline dyes. No polar staining was observed in mounts made from the various cultures either with freshly made thionine, Lofliers alkaline-methylene blue, or weak solutions of carbol-fuchsin, polar staining being one of the chief tinctorial properties of the bacillus pestis. In treating the pure cultures by Grams method, they invariably retained their stain. The bacillus pestis is readily and completely decolorized by the Gram method. Moreover, the appearance, even of the few short forms of the streptococcus which were observed in the pus and in the earlier cultures did not have the appearance of the plague bacillus which I have had the privilege to see in several of the eastern laboratories, notably those at the Johns Hopkins hospital, the Hoagland laboratory, or at the New York state quarantine on Staten Island,...
