Reviews

Completely essential read through publication. It normally does not expense excessive. It is extremely difficult to leave it before concluding, once you begin to read the book.

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Photon and electron induced transformations and pattern formation in amorphous chalcogenide nano-layers | Chalcogenide glasses or, more generally, amorphous chalcogenides are known as excellent materials for optoelectronics. The interest in amorphous nanolayered materials is caused by the wide range of tunable properties. Their physical properties are variable depending on the composition and they are easily tailored by external excitation such as light, e-beam or other sources of energy. They have an important property to undergo various specific, peculiar only to chalcogenides, structural transformations. These structural transformations are accompanied by the change of their electric and optical properties. Therefore they have found several applications in optoelectronics and photonics. The present thesis contains new results and conclusions on laser light and e-beam induced volume expansion and surface pattern formation investigated in the selected Se/As₂S₃, Ge₂₀Se₈₀/Ge₃₃S₆₇ and Sb/As₂S₃ nanolayered structures. The obtained results give a new insight into the mechanism of stimulated transformation and characteristics of the nanol | Format: Paperback | Language/Sprache: english | 160 gr | 220x150x6 mm | 108 pp.
