

## Genetic Variation in Mansionia altissima A. Chev. And Triplochiton scleroxylon K. Schum under Different Regimes of Human Impact in Akure Forest Reserve, Nigeria

By Akindele Akinagbe

Cuvillier Verlag Sep 2008, 2008. Taschenbuch. Book Condition: Neu. 209x147x14 mm. Neuware - Humans have exploited forests for thousands of years as they seek to use forest species as resources for food, fuel and timber, or to clear forested land for agricultural and urban purposes. In modern times, forests exposed to intensive human disturbance are the species-rich tropical forest ecosystems. For instance, Nigeria has the world's highest deforestation rate of primary forests. Between 2000 and 2005, 55.7 percent of primary forests in the country, defined as forests with no visible signs of past or present human activities, were lost as a result of human activities such as logging, subsistence agriculture, and the collection of fuelwood. Since genetic diversity within species is crucial for their long-term survival, conservation of genetic diversity in tree species should be given high priority. For effective conservation of genetic diversity in tree species in a country where prevalent human activities are shrinking its forests, effects of human activities on genetic diversity in tree species need to be analysed. This dissertation aims at analysing and comparing effects of human impacts on genetic diversity in Mansionia altissima A. Chev. and Triplochiton scleroxylon K. Schum. Mansionia altissima and Triplochiton scleroxylon are important West African timber tree species of family Sterculiaceae with contrasting successional...

### Reviews

*This type of ebook is every little thing and made me looking ahead of time and more. It is among the most amazing book i actually have read through. Its been designed in an exceptionally simple way in fact it is simply soon after i finished reading through this pdf in which actually transformed me, change the way i believe.*
