Reviews

The ideal pdf i at any time go through. It is really basic but unexpected situations from the fifty percent of your pdf. Its been designed in an extremely easy way and is particularly only after i finished reading this pdf through which really changed me, alter the way i really believe. (Prof. Kendrick Stracke)

Springer. Hardcover. Condition: New. 222 pages. Dimensions: 9.4in. x 6.3in. x 0.7in.VLSI CADhas greatly beneted from the use of reduced ordered Binary Decision Diagrams (BDDs) and the clausal representation as a problem of Boolean Satisability (SAT), e. g. in logic synthesis, ver- cation or design-for-testability. In recent practical applications, BDDs are optimized with respect to new objective functions for design space exploration. The latest trends show a growing number of proposals to fuse the concepts of BDD and SAT. This book gives a modern presentation of the established as well as of recent concepts. Latest results in BDD optimization are given, c- ering dierent aspects of paths in BDDs and the use of ecient lower bounds during optimization. The presented algorithms include Branch and Bound and the generic A -algorithm as ecient techniques to - plore large search spaces. The A -algorithm originates from Articial Intelligence (AI), and the EDA community has been unaware of this concept for a long time. Re- cently, the A -algorithm has been introduced as a new paradigm to explore design spaces in VLSI CAD. Besides AI search techniques, the book also discusses the relation to another eld of activity bordered to VLSI CAD and BDD optimization: the clausal representation as a SAT problem. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Hardcover.
